Description

vsr_c.pulse10.ebe is a voltage source connected between nodes p and n, which can be used for generating pulses. Up to 20 transitions between y_low and y_high are allowed, the actual number of transitions being set by the integer parameter n1. The real parameters t1, t2, etc. are the starting times of the transitions. t_rise and t_fall are the rise and fall times of the transitions, respectively.

The effect of the various paramters of vsr_c.pulse10.ebe is shown in the following figures.

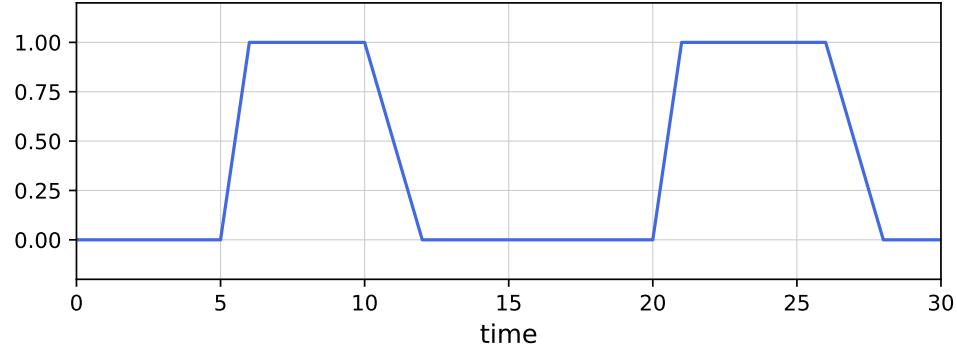

Figure 1: Output of `vsrc_pulse10.ebe` obtained with $i0 = 0$, $n1 = 4$, $t1 = 5$, $t2 = 10$, $t3 = 20$, $t4 = 26$, $y_low = 0$, $y_high = 1$, $t_rise = 1$, $t_fall = 2$.

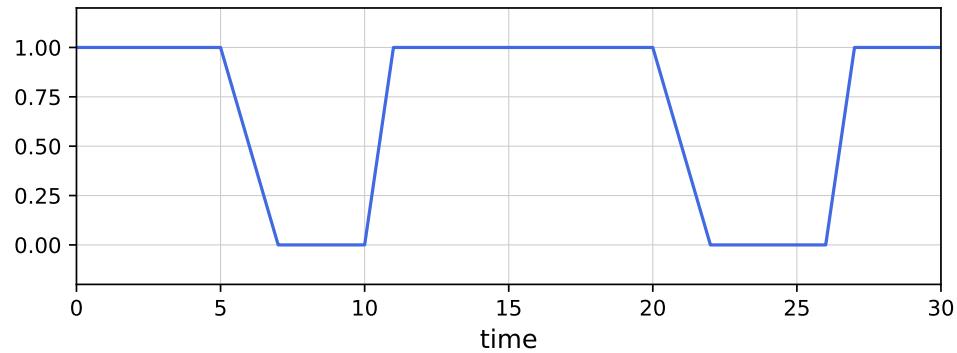

Figure 2: Output of `vsrc_pulse10.ebe` obtained with $i0 = 1$, $n1 = 4$, $t1 = 5$, $t2 = 10$, $t3 = 20$, $t4 = 26$, $y_low = 0$, $y_high = 1$, $t_rise = 1$, $t_fall = 2$.
